1 DECLARATION OF MARK JOSEPH WILDERMUTH
2
3

I, Mark Joseph Wildermuth, do hereby declare as follows:

1 5. I have personal knowledge of the facts set forth in this
2 Declaration, and if called upon to testify to these facts, could
3 and would do so.

4
5 9. I am a civil engineer specializing in water resources
6 engineering. I have a Bachelors (1975) and Masters Degree (1976)
7 in engineering from the University of California, Los Angeles. I
8 am a licensed civil engineer in California. I have worked at
9 Tetra Tech, Inc. (1976-1980), Camp, Dresser and McKee, Inc. (1980-
10 1987) and James M. Montgomery, Consulting Engineers (1987-1990).
11 I own a consulting engineering company called Mark J. Wildermuth,
12 Water Resources Engineers, a sole proprietorship, located in San
13 Clemente, California. I have owned and operated my company since
14 October 16, 1990. Since 1980, I have worked almost exclusively on
15 the hydrologic, hydrogeologic, water quality and water resources
16 planning issues in the upper Santa Ana watershed of which the
17 Chino Basin constitutes about 40 percent.
18
19

20 23. The Chino Basin Judgment provides little practical
21 guidance regarding the criteria to be used to develop and
22 implement an optimum basin management plan. The Chino Basin
23 producers have worked to develop such a plan. These producers
24 spent over \$1 million over three years on the Chino Basin Water
25 Resources Management Study ("CBWRMS"). The CBWRMS was
26
27
28

1 comprehensive, projecting 50 years into the future from the then
2 current state of land and water resources development to ultimate
3 development in the year 2040. The producers, through the
4 Watermaster, are in the process of implementing several of the
5 recommendations of the CBWRMS including the establishment of
6 limits for local storage accounts, developing new groundwater
7 recharge capacity for yield augmentation and replenishment, and
8 evaluating the safe yield.

9
10 4. Certain allegations have been made about groundwater
11 loss in the Basin. My findings indicate that this is an incorrect
12 conclusion since the producers did not know the amount of
13 groundwater losses until late 1995. I conducted a study for the
14 Advisory Committee that included an estimate of the groundwater
15 lost to the Santa Ana River due to groundwater banking by
16 Metropolitan Water District of Southern California
17 ("Metropolitan"), some appropriators, and overlying non-
18 appropriators. This study was completed as result of the CBWRMS.
19 I estimated the groundwater losses to the Santa Ana River due to
20 groundwater banking to be approximately 37,000 acre-feet during
21 the period 1978/79 to 1993/94. This estimate is based on an
22 interpretation of modeling results from the CBWRMS and my
23 professional engineering judgment.

24
25 5. My estimates were first presented to the producers in
26 late 1995. Prior to publishing my findings, the producers had no
27 knowledge of the estimated magnitude of the groundwater losses
28 from storage and therefore could not have knowingly violated the

1 Judgment or benefited from water estimated to have been lost from
2 storage. This finding, its implications and resolution have been
3 discussed by the producers over the last two years. Significant
4 progress has been made and an agreement to limit water in local
5 storage accounts and to assess losses is currently being
6 negotiated. The producers have expanded their groundwater
7 monitoring activities, individually and through the Watermaster,
8 to allow more refined estimates of the losses due to the
9 groundwater banking to be made in the future.

10

11 6. With respect to the allegations made regarding the
12 degradation of water quality in the Basin, the parties to the
13 Judgment can do little if anything to either allow or disallow
14 water quality degradation. Controlling degradation comes under
15 the purview of the Regional Water Quality Control Board, Santa Ana
16 Region ("RWQCB"). The RWQCB regulates municipal and industrial
17 waste discharges to control groundwater degradation.

18

19 7. Preliminary results for the current Total Dissolved
20 Solids ("TDS") and Total Inorganic Nitrogen ("TIN") study (of
21 which the Watermaster is a contributor) suggests that what was
22 previously thought to be TDS or nitrate degradation at many wells
23 may in fact be periodic groundwater quality changes caused by
24 climatic trends rather than long term degradation trends.
25 Modeling results from the CBWRMS showed that the future TDS and
26 nitrate concentrations in the Chino Basin have only slight
27 increases or decreases in concentration, and that these future
28 trends are not significantly influenced by the pumping patterns of

1 individual producers or amounts of water in local storage
2 accounts.

3
4 8. The appearance of a worsening groundwater quality
5 condition for TDS and nitrates is due in part to degradation and
6 to increased groundwater production by municipal purveyors. Large
7 increases in pumping can cause groundwater flow conditions to
8 change and subsequently cause nearby contaminants to flow to a
9 well (such as in the Jurupa area). I am not aware of any data
10 that concludes that most of the water now pumped out of the ground
11 fails to meet Health Department standards for safe drinking water
12 without blending or treatment.

13
14 9. Past allegations that producers in the northern end of
15 the basin are moving wells and pumping facilities to the north
16 part of the Basin to get better water quality and at the same time
17 degrading water in the south are false and misleading. No party is
18 precluded from putting wells in the northern part of the Basin in
19 areas of good quality and moving that water into their service
20 area. Producers do relocate their production to obtain good water
21 quality when relocation makes sense. For example, Monte Vista
22 Water District is about to conduct a study to optimize the
23 location and amount of groundwater pumping in the vicinity of the
24 Montclair spreading basins to ostensibly increase production of
25 potable water in the northern part of the basin. Geography,
26 topography and facility requirements make this more expensive for
27 southern agencies -- but not prohibitively so.

1 10. Relocation of production and any similar actions by a
2 northern producer do not cause groundwater quality in the south to
3 degrade or concentrate. Poor quality groundwater in the southern
4 part of the Basin is the result of irrigated agriculture and dairy
5 waste management practices and not a result of groundwater
6 production patterns of the northern producers. The primary source
7 of TDS and nitrate contamination is agriculture. The CBWRMS
8 projections also show that there is little difference in future
9 groundwater quality trends with future groundwater management
10 plans that were developed with the producers -- including Monte
11 Vista, Chino, Chino Hills, Norco and Jurupa Community Services
12 District.

13
14 11. Poor water quality conditions in the southern part of
15 the basin are exacerbated by reuse of the degraded groundwater by
16 agriculture -- not by groundwater production patterns of the
17 northern producers. Poor quality groundwater that is not produced
18 by a municipal or agricultural users either remains in groundwater
19 storage or becomes rising water in the Santa Ana River. This
20 groundwater that remains in storage can be recovered in the future
21 by groundwater treatment systems or agricultural producers.

22
23 12. A tabulation of water quality data was compiled for the
24 Watermaster for the 1996-1997 Chino Basin Watermaster Groundwater
25 Conditions Survey that will be published in August 1997. A true
26 and correct copy of this data is attached to this declaration as
27 Exhibit "A." Monitoring data, collected and compiled for the
28 Watermaster for the period 1978 to 1996, do not show dramatic

1 groundwater degradation over the period that the Watermaster has
2 been in existence. There is simply no factual support for past
3 allegations that Watermaster actions or non-actions have
4 contributed to dramatic water quality degradation.

5

6 13. NO computations have been made to determine if yield has
7 actually dropped as agricultural production has decreased and
8 producers in the north either increased production or purchased
9 less replenishment water. The new land use conversion process
10 developed and implemented by Watermaster assures that most of the
11 new agricultural transfers will remain with water purveyors that
12 will serve the areas in the southern Chino Basin. The major
13 southern appropriators, Chino, Jurupa and Ontario, know they have
14 to produce water in the southern part of the Basin in order to
15 keep their new production rights, and have stated this intention
16 several times at appropriate Pool and Advisory Committee meetings
17 over the last two years.

18

19 I declare under penalty of perjury under the laws of the
20 State of California that the foregoing is true and correct.

21

22 Executed on the 18th day of August 1997, at Kahului, Maui,
23 Hawaii.
