

Optimum Basin Management Program Phase 1 Report

The Optimum Basin Management Program Phase 1 report was prepared pursuant to the February 1998 court order that ordered the Watermaster to develop and implement an Optimum Basin Management Program (OBMP). Watermaster conducted an investigation of the current and future groundwater management challenges and developed a water resources management program to overcome these challenges. Watermaster and the Parties developed very precise goals, identified the impediments to these goals, developed detailed programs to remove these impediments, and developed an implementation plan to implement the OBMP.
