

Peace II Documents

The Peace II Agreement process started due to a need to resolve the funding for expansion of the OBMP groundwater desalter program. The Peace II Documents include the complete record of court documents and summarize the process of finalizing and approving the Peace II Agreement in 2007. The documents illustrate the professional and business-like manner in which the Parties conduct themselves. The Peace II Documents also include an engineering report that describes the basin management programs included in the Peace II Agreement and the projected response of the Chino Basin.
